

**PLASSON'S**  
*Quick Coupling Valve*

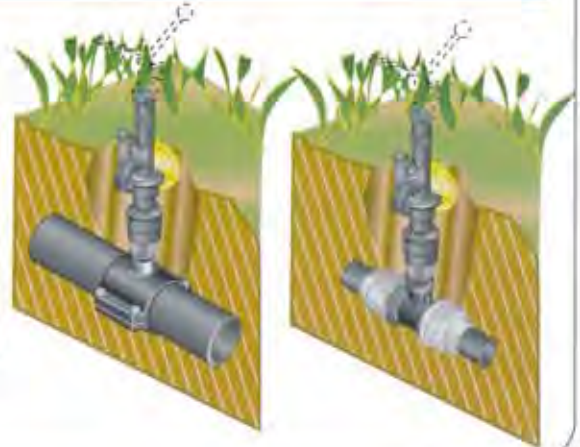

# PLASSON'S Quick Coupling Valve

## Applications

This ground-level fixed valve presents no unsightly or dangerous obstructions and stays damage-free, ideal for:

- Livestock watering systems
- Sprinkler irrigation systems
- Landscaping irrigation

- Single-action snap-in key – opens valve for water flow into hose/sprinkler
- Time-saving and money-saving
- Highly durable and reliable
- Easy release of key, automatically shuts valve

**Single-action connection** Configuring animal troughs or sprinklers for irrigation is more flexible, quick and easy. Just snap the key in place at the desired fixed valve position, and you're ready to go. No turning water mains on and off – it's all done instantly due to the special features of the Quick Coupling Valve system.

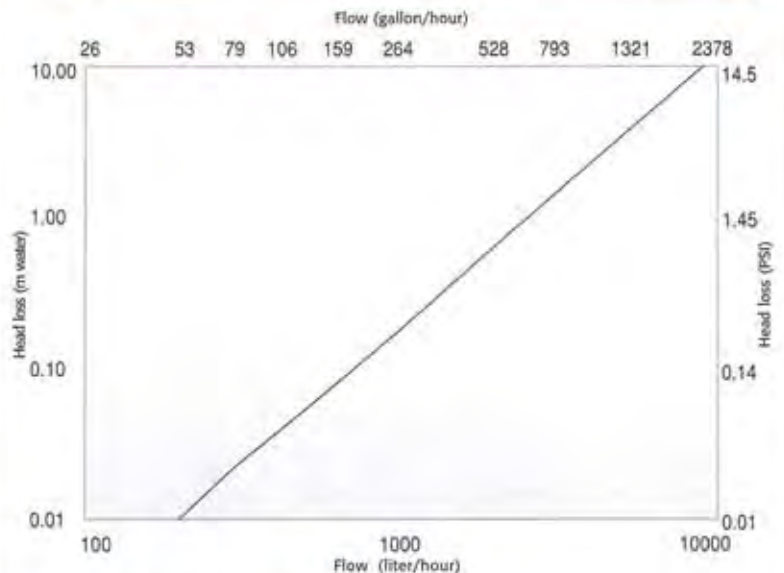

The Quick Coupling Valve system consists of:

Quick Coupling Valve

Key for Q.C.Valve

## Pressure loss VS flow Plasson Quick Coupling Valve

**Highly reliable and durable** The Quick Coupling Valve is made of Polypropylene and acetal • Stainless steel spring • Rubber seals made of NBR. These materials withstand the most adverse conditions.

\* Not for use with hot water. For using with fluids other than water, please consult manufacturer.
