

# BENDING

TIPS  
&  
Techniques

horserail.com

## TOOL

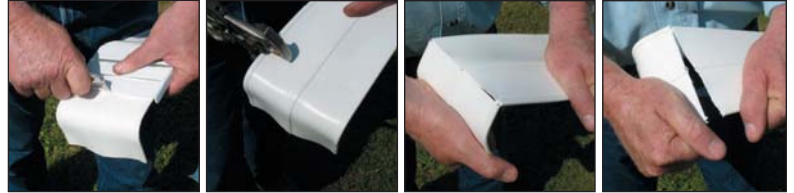

Available for  
4", 5" & 6" Rail

**The perfect tool for bending the rail to the optimum shape and dimension.**

### Cutting the rail

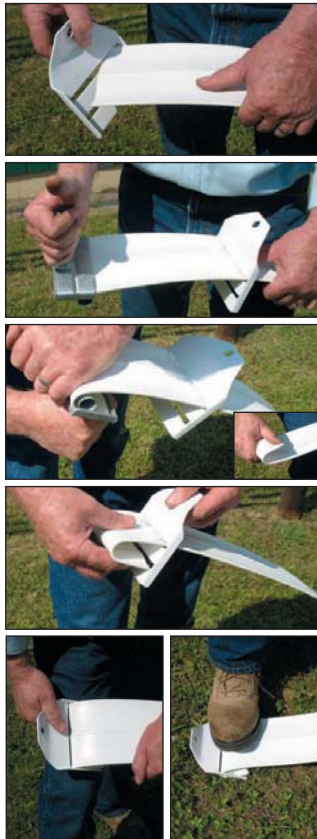

End up with a square, neat edge — easily, quickly & safely.

- A.** Using a buckle as a square, score the rail with a sharp utility knife.
- B.** Use wire cutters to snip both outside wires on score line.
- C.** Bend rail along score — flex back and forth to snap middle wire(s) (if rail contains 3 or more wires)
- D.** Finish by tearing rail.

### Bending to ATTACH rail

- A.** Slide end buckle onto rail.  
*Note: Make sure buckle ribs face rail.*
- B.** Insert end of rail into bending tool slot nearest cylinder.
- C.** Bend rail toward second slot on buckle using the bending tool and finish shaping by hand for easy insertion into the buckle slot.\*
- D.** Flatten by first pulling down on the rail/buckle assembly then place it on a flat surface and apply pressure with your foot.

\*Accurately shaped rail

CORRECT RADIUS

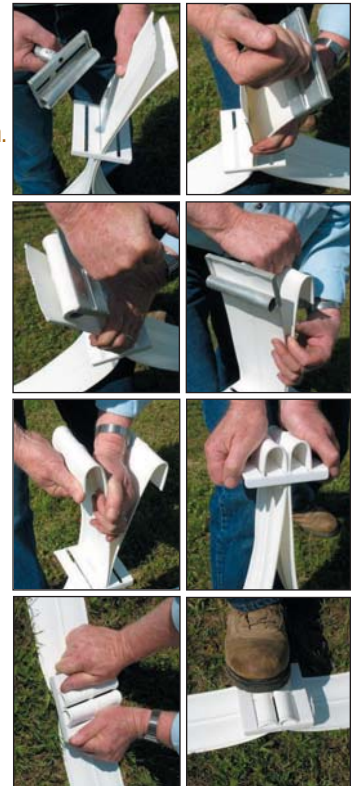

RADIUS TOO TIGHT

### Bending to JOIN rail

- A.** Slide ends of two rail sections through the middle slot of joining buckle.  
*Note: Make sure buckle ribs face down.*
- B.** Insert end of one rail into bending tool slot nearest cylinder. Bend first rail away from second rail. Then bend second rail in opposite direction creating an "M" shape.
- C.** Finish shaping by hand for easy insertion into the buckle slots.\*
- D.** Insert both shaped rails into buckle and flatten by first pulling down on the rail/buckle assembly then placing it on a flat surface and apply pressure with your foot.
